Art Unit: 2624

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 25-48 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 25-47 define an **image processing program** embodying functional descriptive material. Claim 48 defines a **storing medium**. However, claims 25-48 do not define a **computer-readable medium or memory** and is thus non-statutory for that reason (i.e., “When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized” – Guidelines Annex IV). That is, the scope of the presently claimed can range from paper on which the program is written, to a program simply contemplated and memorized by a person. The examiner suggests amending the claim to embody the program on “**computer-readable medium**” or **equivalent** in order to make the claim statutory. Any amendment to the claim should be commensurate with its corresponding disclosure.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2624

In claim 1, the alternative expressions “setting means for setting image size change or image region moving” (lines 2-3) and “the image size change or image region moving can be performed on the code stream with all or a part of contents of the original image being maintained” (lines 11-14) render the claim indefinite because they present uncertainty about the functions performed by the setting means and position information changing means. Claims 24, 25 include similar alternative expressions, therefore, are also indefinite.

In claim 19, 42, it is unclear as to what a “JPEG2000” or a “Motion-JPEG2000” algorithm refers to. Because the rules set by JPEG2000 or Motion-JPEG2000 can be varied or modified over time, the algorithm can also be varied or modified.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gut et al (7,006,099), Chan et al (7,110,608) and Deshpande et al (7,206,804) disclose an image processing method.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuoc Tran whose telephone number is (571) 272-7399. The examiner can normally be reached on MON-FRI.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eileen D. Lillis can be reached on (571) 272-6928. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
